Design . luxury

Perfect combination of
utility and art

Ingenuity and luxury as a feature, the design focuses on pragmatism as its original intention, customizing your exclusive private elevator space. Your style, your taste and personal pursuit would be integrated into the design, showing your dignity in daily trip.

The over 10 years of professional experience in the design and manufacture of villa elevator is perfectly combined with the decoration design for buildings, which embodies the pursuit of ultimate use of space, showing the designer's ingenuity in every detail.

Four Advantages of Humanized Design

Ultimate Use of Space

The detailed utilizing of space enables the design and manufacture for shafts with minimized specification, which can save space for you while perfectly matching the building's decoration.

Natural Appearance

The panoramic glass sightseeing shaft design provides you and your family with the enjoyment of looking around and intensifies sense of ownership of the building.

Personalized Decoration

The multi-type and multi-material interior decoration design perfectly creates the visual experience of large space in the small shaft.

Convenient Life

The perfect balance of appearance and utility enables a comfortable and free experience.

Product Use Range

Independent villa/Indoor installation/New-built installation/ Townhouse/Outdoor Installation/Reinstallation to the old house/ Duplex apartment.

Quiet . clean

Quiet, Comfortable and
Energy-saving

Enjoyment of Quiet Life

The optional configuration of roller guide shoes and silence contactors makes each trip quiet and peaceful.

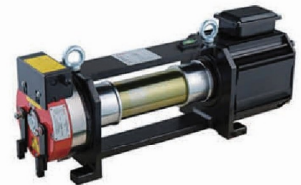

Coated Steel Belt

The surface cladding is high-strength polyurethane material (TPU), which protects the steel wire from corrosion;
Green and environmentally protective, no need to use lubricating oil and hence no waste oil, which is clean and contributes to a long service life;
It is easier to bend, so that the contact area with driving wheel is bigger and the
ole system is more energy-saving and efficient.

Power System

The permanent magnet motor technology and imported bearings are low in noise.
The 220V dedicated motor can complete the traction under conventional voltage and the actual power consumption is almost the same as that of the air conditioner

Intelligent . exquisite

Intelligently luxurious,
ultimately safe

APP(Optional)

APP also has the 7*24 hours full-time function, through the mobile phone APP, you can see the real-time situation Inside the cabin, so you can protect your family every moment.

ARD Power failure emergency device(Optional)

Equips with a key dial function, according to your settings, start a key dial smart mode, will dial the calls one by one based on your settings.

The picture shows the optional interface. For the standard one-touch dial interface, please contact sales,

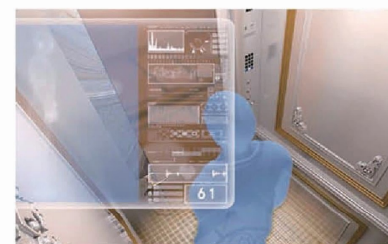

Intelligent voice call system(Optional)

The passenger enters the elevator, wakes up the calling system by voice, and enters the floor to be reached by voice. The control system immediately responds and executes the instructions.

Body infrared induction function(Optional)

When Infrared induction of human body monitors that passengers have been kept in the villa lift for more than 5 minutes, the system will take the initiative to alarm. Ensure the passenger's emergency is found in time, and keep your family safe at any time.

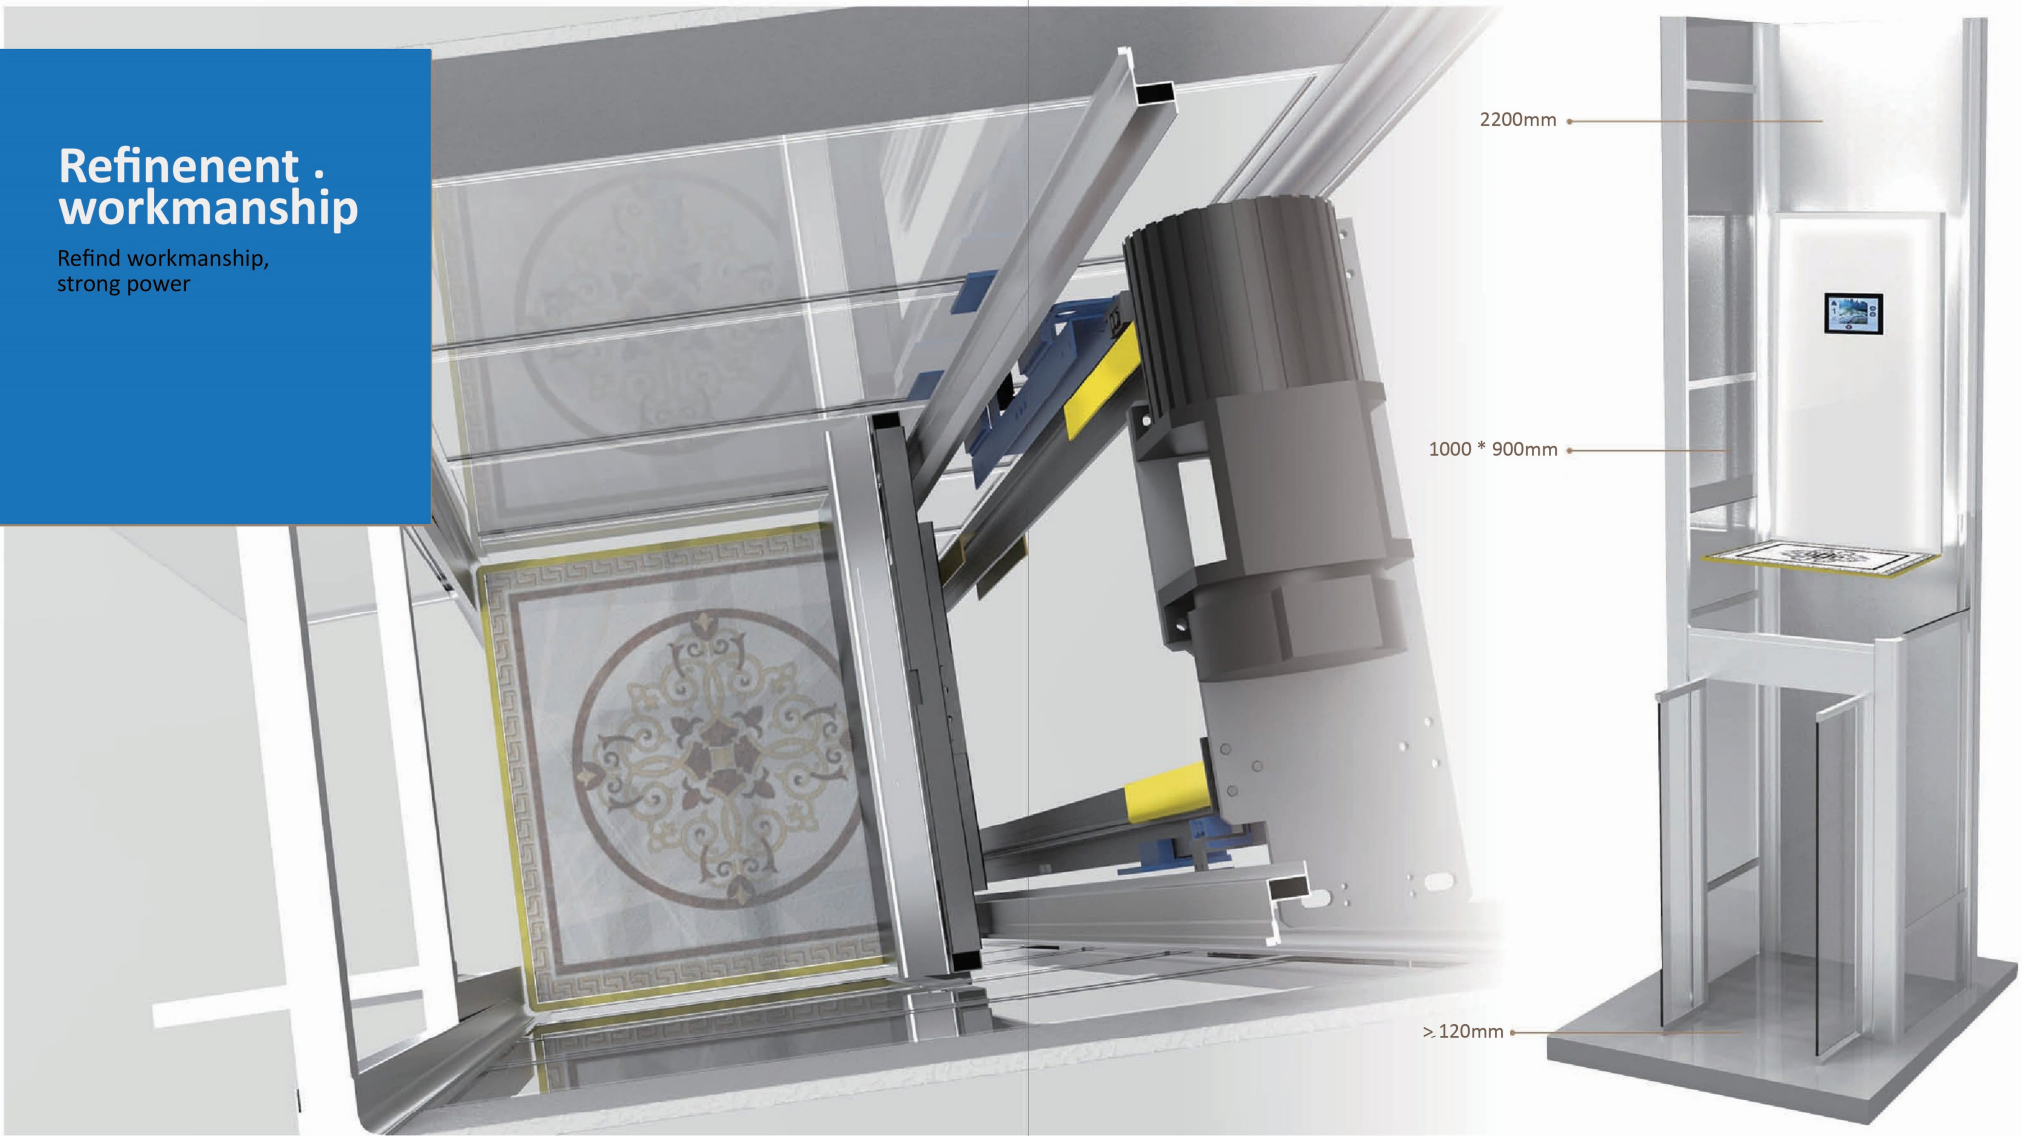

ARD Power failure emergency device

To prevent accidental power failure, the elevator can be used ARD emergency flat layer power, to ensure the power suddenly power off, can let the elevator still has enough power to the safety of the passengers to the nearest station.

Refinement . workmanship

Refind workmanship,
strong power

Compact structure

The layout of the top floor can be suitable for various environment, the villa lift could be installed inside the shaft with the minimum size of 1000x900mm, the minimum overhead is 2200mm, the pit depth is no less than 120mm.

Steel Belt Platform Elevator

The steel belt platform elevator is a new home elevator product independently developed and manufactured by the company. The adoption of composite steel belts has replaced the traditional steel rope and greatly reduced the occupation of space, greatly improving the space utilization rate. Based on the industry's advanced gearless traction technology and the concept of safety and utility, the steel belt platform elevator is tailored to be the new are product that integrates safety, stability and noise reduction.

Steel Belt Screw Elevator

Using the 4: 1 world original technology independently developed by the company, the lifting speed reaches 0.25 m/s and the rotating speed is 50% slower than the traditional screw elevator. The lifting platform is connected to the coated steel belt, while the motor is separated from the screw, so that the vibration source is effectively separated. The control system uses the Monarch system to facilitate daily maintenance. After 10 years of hard work, the company has made great efforts to create this noise-free, stable and high-quality home elevator product.

Screw Elevator

Screw elevator is suitable for private residences, high-rise duplexes, villas and other places. A variety of solutions are available for customers to choose from. Our free choice of personalized decoration style embodies real high-end services for owners. This type of elevator is small and flexible, having low requirements for space and civil engineering. It is suitable to be installed in the middle of stairs or other places with narrow space. Its easy installation provides you with a safe and stable lifting solution.

VILLA ELEVATOR SERIES

Traction Gantry Elevator

Based on the balance of the counterweight and the car, the guide rails are located on both sides of the car respectively and the forces are evenly distributed. There is never a need to change the engine oil and hence no pollution, which is environmentally protective and low in maintenance costs. There is no force between the guide wheel and the track, the operation is hence safe, stable and free of noise.

Traction Steel Belt Backpack Elevator

The car guide rails are on the same side of the car and are no longer necessary on the left and right sides of the car, which saves the shaft space on both sides. It has a unique design structure (90-degree door opening), which can be fully opened on three sides and only one side needs to be connected to the building. Thus it requires little about the building structure and has strong adaptability as well as low requirements for shaft structure.

Service with Heart

Quality service will bring more value to brands and customers. Therefore, we are dedicated to becoming an expert in the production of home elevators. At the same time, we hope to satisfy more and more customers' pursuit of quality life through professional and caring services.

MARGA LIFT

Automatic Remote Repair

Under single operation data, the system will be repaired remotely by itself to ensure the normal operation of the elevator.

Operation Report Active

Regularly generated operation reports will be sent to you via email. According to the overall operating conditions, the maintenance staff will adjust the balance coefficient of the elevator in time to ensure that the elevator is in the best running state.

Reminder of Maintenance

The test results of the elevator core components will be listed, which timely reminds you of the time and items that need to be maintained next time.

Core Part Life Cycle Warning

Current detection on three core components, the traction machine, controller and door operator, will be performed. If it is not in accordance with the normal operation status, it will be automatically fed back to the elevator headquarters, so that the service staff and your family can take repair and maintain measures in time.

Intelligent Alarm System

If the passenger remains in the car for more than 5 minutes while the alarm system is not activated, the sensor will notify the elevator headquarters service personnel through the remote network to notify the family in time and take corresponding measures.
